## Experience

**Ionic/Angular Developer & Interaction Designer**
**Surely Group** - London - Nov 2016 to present

Working with Surely has been the opportunity to sharpen my skills on Ionic/Angular and to participate to the design process of plenty of exciting projects.

It was also the chance to experiment the implementation of frontend structures from scratch on starting projects.

**Front-End Consultant (remotely)**
**Doxy.me** - Provo (USA) - Dec 2016 to Jan 2017

I have been hired as consultant to review their existing Ionic 1 app and to give guidelines about what could be done to make the project more maintainable.

**Front-End developer & UX Designer**
**iMakr & MyMiniFactory** - Londres - February to November 2016

My first experience in a foreign country. I worked on two projects:
· An eCommerce plateform for iMakr built with prestashop and Bootstrap.
· A 3D printable contents sharing platform for MyMiniFactory (iMakr's subsidiary) built with Symfony and Foundation.

Every implementation was preceded by a discovery and design step during which I produced high fidelity mockups and prototypes. I also worked closely with our in-house 3D designers to gather their feedbacks and suggestions.

**Front-End developer & UI Designer**
**DigiTela** - Montpellier Area (France) - Apr to Jun 2015

My first professional experience as a developer and a designer. I was mostly working on the mockups and the conception of our clients' websites with Wordpress. My tasks have been:
· To redefine and implement the graphical identity of my company's website.
· Create a platform for an association related to cancer research.
· Create a design for the showcase website of a southern France hairdressers and estheticians association.

## Projects

**Surely Group**
Web app | Frontend developer & UX designer

**A Lloyd's of London insurer**
Web app | Frontend developer & UX designer

**A Lloyd's of London insurer**
